DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bowers et al. in view of Conway.

With regard to claims 1-3, Bowers discloses a method for inventory management that includes the steps of affixing an identification tag to an inventory item (col. 2 line 10), identifying the item by scanning the tag with a scanning device (col. 2 line 43+), classifying the item by group (see Fig. 7), issuing the item (col. 4 line 54+), assigning the item to an individual (col. 4 line 52+, see Fig. 4), recording the return of the item (col. 5 line 3+), recording the usage of the item (col. 4 line 49+, see Fig. 4), and deactivating the item (col. 4 line 30+). It would be obvious to one skilled in the art that the inventory items could be equipment for a sports team. With regard to claim 4, retrieving information via the Internet is well-known and common practice. With regard to claim 5, information relating to an item is matched with a unique identification code (see Fig. 4).

Art Unit: 3627

The method of Bowers differs from the claimed invention in that it does not include turning on a flag for a given item after the occurrence of a certain event and checking to see if the flag has been turned on.

Conway discloses a method for tracking and managing medical inventory items that includes turning on a flag for a given item after the occurrence of a certain event and checking to see if the flag has been turned on (col. 8 line 9+). It would be obvious to one skilled in the art that a variety of tags could be created for various characteristics of the inventory items, such as groups, events, etc.

It would be obvious to one skilled in the art to modify the method of Bowers to include turning on a flag for a given item after the occurrence of a certain event and checking to see if the flag has been turned on, as taught by Conway, to provide additional information regarding the status of inventory items, particularly consumables, to aid in ordering of new items.

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Brook et al. disclose a method for tracking drugs in a hospital that uses a handheld scanner and individual ID tags. Mabry et al. disclose a RFID tag system for tracking silicon wafers. Pape et al. disclose a system for tracking items in a distribution facility.
